

# RODENT BLASTER®

The last rodent removal system that you will ever need!

## Rodent Blaster® Products

The **Rodent Blaster Hot Shot**® is made of all metal construction. 304 stainless steel, 6061 billet aluminum and also steel. Built tough for a dirty nasty environment for many years of trouble free use. No plastic here! 100% built and assembled in the USA !

The **Rodent Blaster Hot Shot**® kills problem rodents that eat, chew and destroy our yards. The [Blaster Gas Injector](#) injects propane and oxygen, then the [Remote Ignition Detonator](#) ignites it with a remote detonating device to exterminate the pests that live in underground tunnels and burrows quickly, safely and humanely without any dangerous poisons or traps. The **Rodent Blaster Hot Shot**® uses our specially designed remote detonating system to ignite a propane and oxygen mixture that delivers a 6000 feet per second shock wave that instantly terminates your problem pest inside of their burrow. You won't have any dead rodents to clean up after using our **Rodent Blaster Hot Shot**®. It is safe for the environment and will not harm pets and wildlife unlike dangerous poisons and traps.

---

SRM Industries is Located in Northern California and started in the rodent pest industry in 1997. Over twelve years of growing almonds and grapes we have used and tested many brands of different types of rodent control devices and we have had many problems and failures. This motivated us to design and develop our **Rodent Blaster Hot Shot** ® system. We have had several Rodent Blaster system design changes over the years. We have now developed the best Rodent Blaster product on the market for cost effective rodent abatement.
